

Accessing and using LEVANTE data

LEVANTE Hackathon 2026

Mika Braginsky & Theresa Cheng | July 6, 2026

An initiative of

Who are we?

Mika Braginsky, PhD (they/them)

Researcher & Software Developer

LEVANTE Team, Stanford University

Theresa Cheng, PhD (she/they)

Researcher & Education Coordinator

LEVANTE Team, Stanford University

Our goal today

Getting you access to LEVANTE's public data release for future methods tutorials, hackathon projects, and future research projects

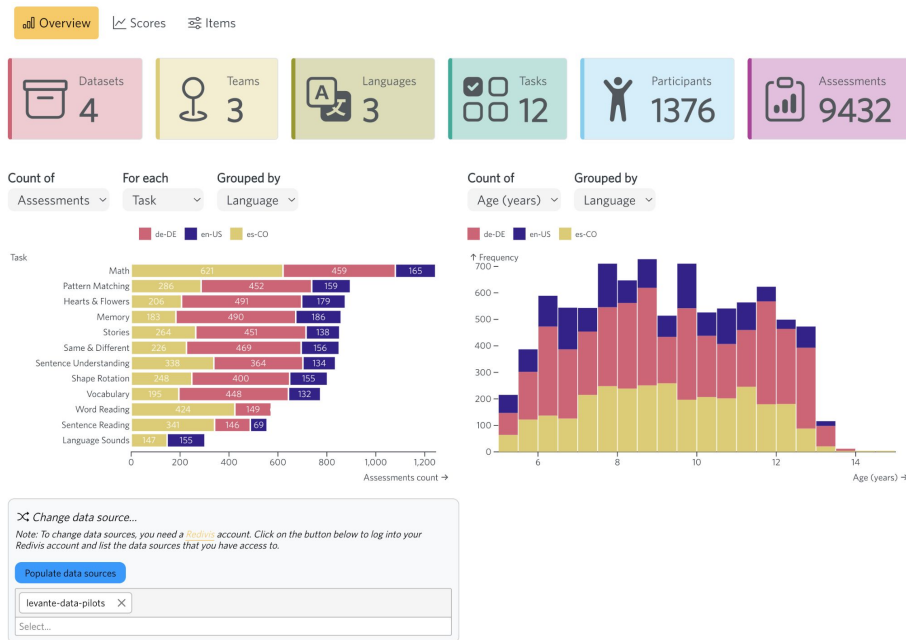

Road map

1. Overview of data and tutorial code access
2. Getting set up on your own device
3. Ievante R walkthrough
4. Data details
5. Getting help

Road map

1. Overview of data and tutorial code access
2. Getting set up on your own device
3. levante R walkthrough
4. Data details
5. Getting help

What does the public data release contain? Let's explore

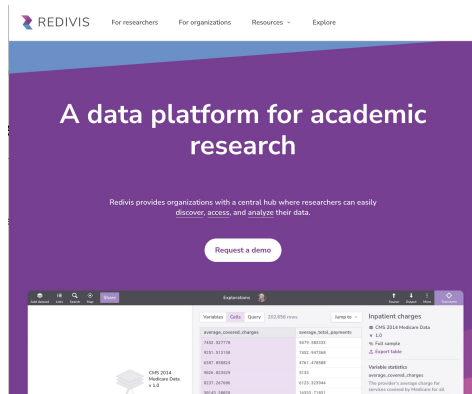

LEVANTE Data Browser

<https://researcher.levante-network.org/data-overview>

Accessing the data via Redivis and the levante R package

Redivis (required)

- Academic database manager
- Every person receiving data must create their own account
- Requires e-signature on a Data Use Agreement

levante (recommended for use with R)

- R package to load Redivis tables as dataframes in R/RStudio
- Requires an account on Redivis for authentication
- <https://levante-framework.github.io/levante-r>

levante-r

R package for accessing LEVANTE data. Some useful links:

- [An overview of the LEVANTE project.](#)
- [Details about LEVANTE's scoring and psychometrics.](#)
- [Details about the LEVANTE child tasks.](#)
- [How to access the LEVANTE data.](#) Prior to completing the steps described at this link, you only have access to an example dataset with toy data.
- [Data browser.](#) You can browse scored and trial level task public data using our data browser. If you are a partner with access to additional datasets on Redivis, you will also be able to load and browse those datasets on the data browser.

Installation

```
# install.packages("devtools") # if you need the devtools package, uncomment this
devtools::install_git("levante-framework/levante-r")
```

Two routes to the LEVANTE Hackathon tutorial code

Option 1. On your device

- Requires R/Rstudio installation, strongly recommended to have git, a GitHub account, and authentication (ssh keys)
- Stable for long-term use

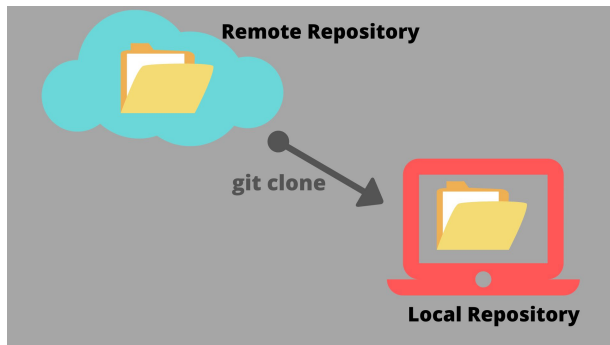

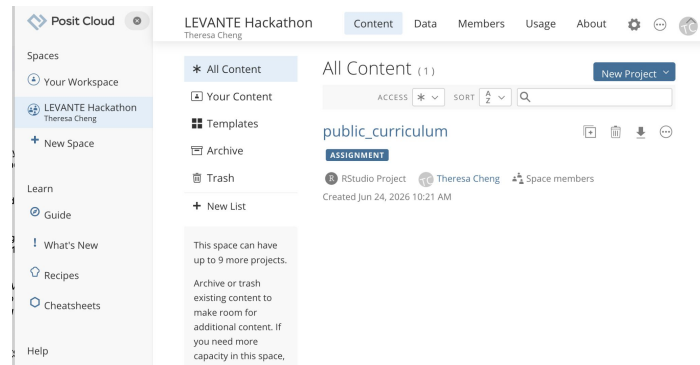

Image from <https://jaisiram.hashnode.dev/>

Option 2. PositCloud

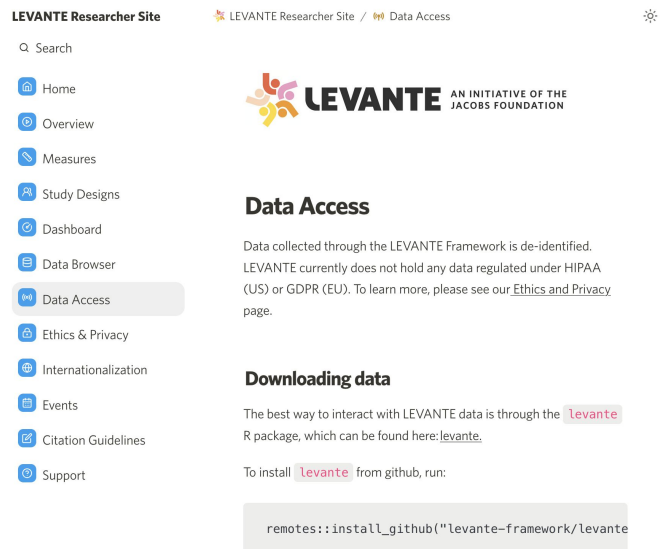

- Requires PositCloud account only
- R/Rstudio via web browser for easy access to tutorial code
- Short-term use (discontinued Aug 31)

Road map

1. Overview of data and tutorial code access
2. **Getting set up on your own device**
3. levante R walkthrough
4. Data details
5. Additional help

Detailed instructions for reference

The screenshot shows the 'Data Access' page of the LEVANTE Researcher Site. The page has a header with the site name and a breadcrumb trail. A left sidebar contains a search bar and a list of navigation links. The main content area features the LEVANTE logo, a 'Data Access' heading, and text explaining that the data is de-identified and not regulated under HIPAA or GDPR. It also includes a 'Downloading data' section with instructions on how to interact with the data using the 'levante' R package and how to install it from GitHub.

LEVANTE AN INITIATIVE OF THE JACOBS FOUNDATION

Data Access

Data collected through the LEVANTE Framework is de-identified. LEVANTE currently does not hold any data regulated under HIPAA (US) or GDPR (EU). To learn more, please see our [Ethics and Privacy](#) page.

Downloading data

The best way to interact with LEVANTE data is through the `levante` R package, which can be found here: [levante](#).

To install `levante` from github, run:

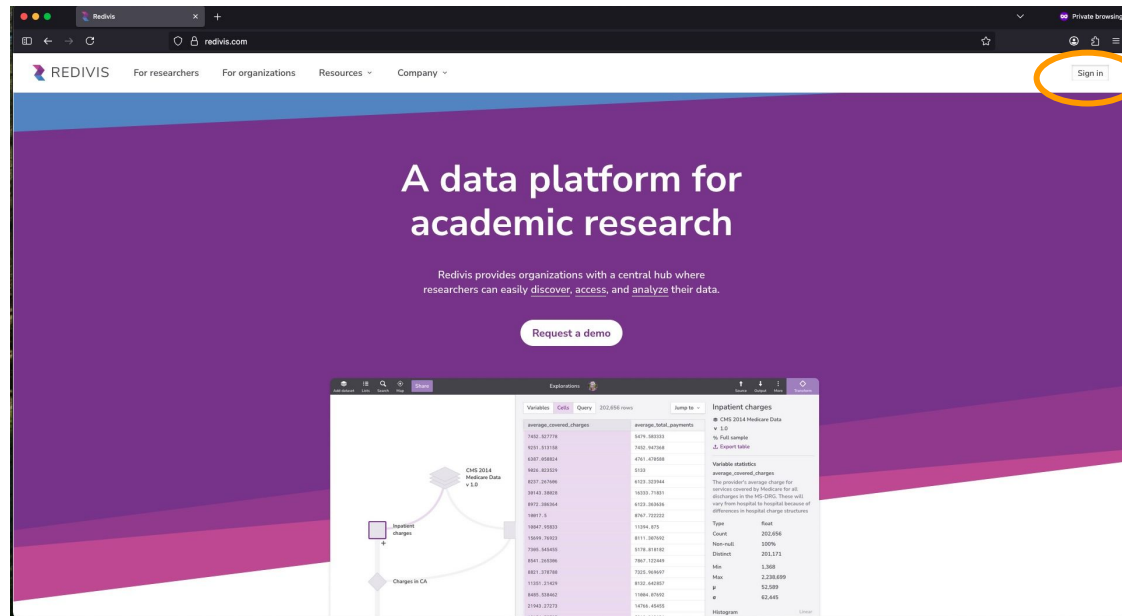

```
remotes::install_github("levante-framework/levante")
```

LEVANTE Researcher Site Data Access page

<https://researcher.levante-network.org/data>

Getting an account on Redivis

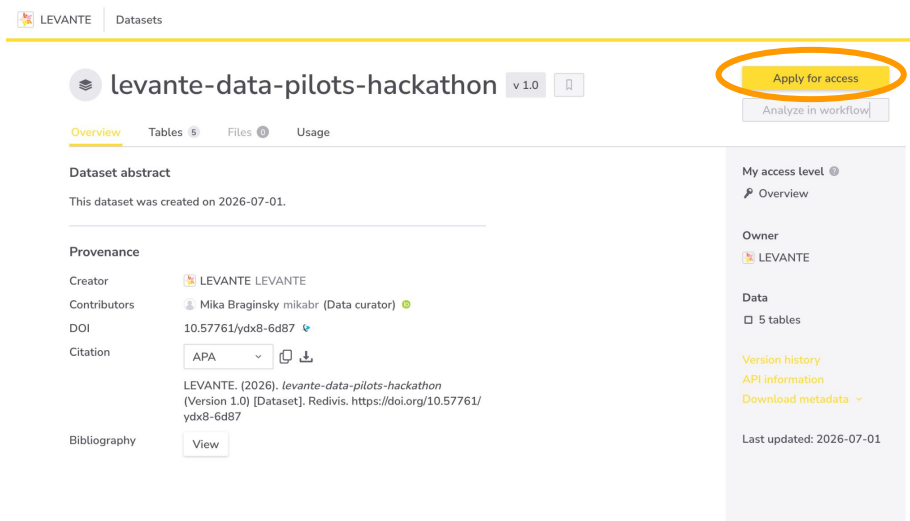

Navigate to <https://redivis.com/> and click "Sign in" (upper right corner)

Accessing the pilot data release for the hackathon

levante-data-pilots-hackathon
is a Redivis dataset

- Processed public data release
- Contains stapled datasets from other sites
- Updated every ~6 months
- Sites access their own private datasets following a different process

Requirement #1: LEVANTE membership

“Join” the LEVANTE organization

The screenshot shows the 'levante-data-pilots' dataset page. The left sidebar contains navigation links: Overview (selected), Tables, Abstract, Provenance, Creator, Contributors, DOI, Citation, Bibliography, and a 'View' button. The main content area is titled 'levante-data-pilots' and includes a 'LEVANTE' logo and an 'Overview access' link. Below this, the 'Access' section lists requirements: 'Overview access' (checked, Public), 'Metadata access' (unchecked, 0 / 2 complete), 'LEVANTE membership' (with a 'Join' button), and 'LEVANTE Data Use Agreement' (with an 'Apply' button). A 'Data access' section at the bottom indicates 'Completed above requirements'. The right sidebar shows 'Apply for access', 'Analyze in workflow', 'Access level', 'Overview', 'owner', 'LEVANTE', '4 tables', 'Data library', 'Information', 'dataset available', and 'last updated: 2026-01'.

Can view table cells and files, query tables, and explore the full dataset
Completed above requirements

Usage rules

Requirement #1: LEVANTE membership

“Submit” your request (auto-approved)

The screenshot shows a web interface for the LEVANTE dataset. A modal window titled "Membership" is open, displaying the "Application" tab. The form includes sections for "Authentication" (ID, Name, Email, Affiliation) and "Public profile" (Contact email, ORCID iD, Disciplines). A "Submit" button is highlighted with an orange circle. The background shows the dataset's overview page with tabs for Overview, Tables, and Bibliography.

Requirement #2: Data Use Agreement (DUA)

“Apply” for the LEVANTE Data Use Agreement

The screenshot displays the 'levante-data-pilots' interface, specifically the 'Access' section. The interface is divided into a left sidebar, a central content area, and a right sidebar. The left sidebar contains navigation links: Overview, Tables, Abstract, Provenance, Creator, Contributors, DOI, Citation, Bibliography, and a 'View' button. The central content area is titled 'levante-data-pilots' and includes a 'LEVANTE' logo. It lists four access requirements: 'Overview access' (Public, Can view dataset page), 'Metadata access' (1 / 2 complete, Can view variables and summary statistics), 'LEVANTE membership' (checked, with an 'Edit' button), and 'Data access' (Completed above requirements, Can view table cells and files, query tables, and explore the full dataset). The 'LEVANTE Data Use Agreement' requirement is highlighted with an orange circle and an 'Apply' button. The right sidebar contains a 'Apply for access' button, an 'Analyze in workflow' button, and a section for 'Access level' with an 'Overview' link. At the bottom of the right sidebar, it states 'Last updated: 2026-01-08'.

Two routes to the LEVANTE Hackathon tutorial code

Option 1. On your device

- Requires R/Rstudio installation, strongly recommended to have git, a GitHub account, and authentication (ssh keys)
- Stable for long-term use

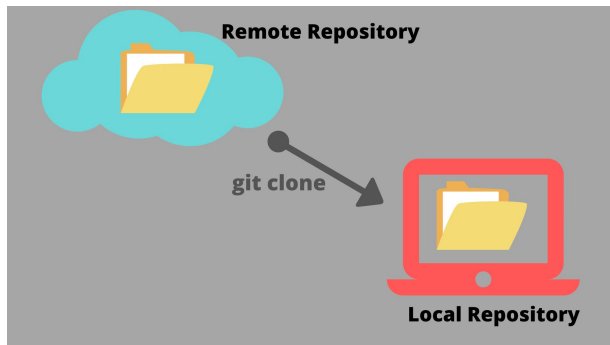

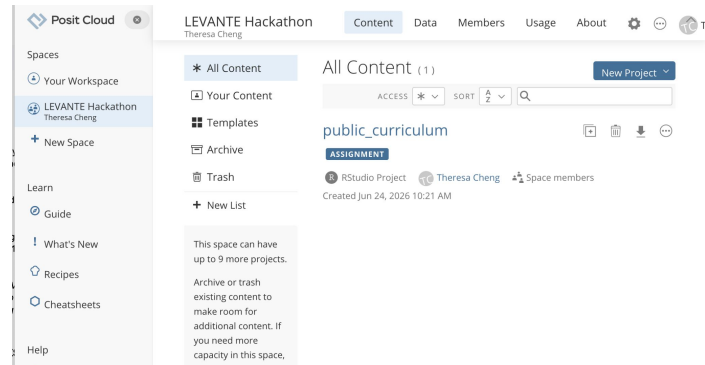

Image from <https://jaisiram.hashnode.dev/>

Option 2. PositCloud

- Requires PositCloud account only
- R/Rstudio via web browser for easy access to tutorial code (from GitHub)
- Short-term use (discontinued Aug 31)

Detailed instructions for reference

Tutorial Access

Tutorials will use real LEVANTE data. We encourage you to follow along with tutorials actively by running code line by line and solving any problems the instructors pose.

The material below is to help you access the data and code for the hackathon tutorials. This information will be covered during the "Accessing and using the LEVANTE data" tutorial of the hackathon (Monday, 9:15 am Pacific Time).

If you cannot attend the "Accessing and using the LEVANTE data" session, please follow the instructions below to set up data access before your first tutorial session if you would like to follow along.

Completing data access requirements on Redivis

Permission to access the data is granted via [Redivis](#), a data-sharing platform used for all LEVANTE datasets. Accessing any LEVANTE data requires users to make an account, join the LEVANTE organization, and e-sign a Data Use Agreement, all through the Redivis platform.

For step-by-step guidelines, visit our Researcher Site [Data Access](#) page (under "Public data release" toggle the "How to access" subheading and instructions will appear).

Accessing the tutorial code

There are several ways to access the tutorial code.

The PositCloud link and GitHub repo will be made available to registered attendees at the start of the event.

PositCloud

[PositCloud](#) is a great option if you want to follow along easily, but don't have R/RStudio and git/GitHub already set up on your computer (see below).

1. Registered attendees will receive a link to the LEVANTE Hackathon PositCloud space.
2. Unless you already have an account, click "Don't have an account? Sign up" to create a PositCloud account and verify

LEVANTE Hackathon Tutorial Access page

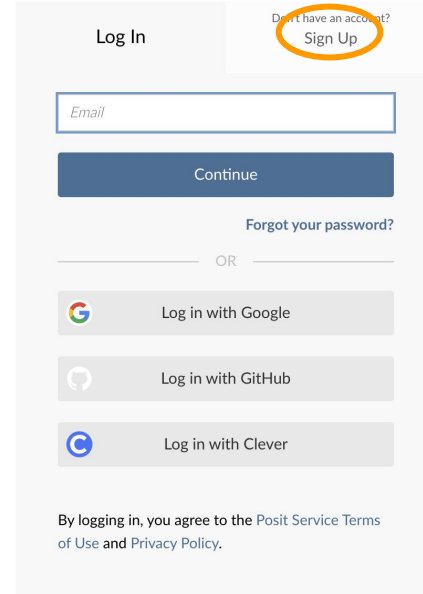

<https://levante-hackathon-2026.github.io/tutorial-access/>

PositCloud

Visit the LEVANTE Hackathon 2026
PositCloud space link (in the chat)

Unless you already have an account,
click “Sign up” to create an account
and verify your email.

Click “Yes” to join the space!

A screenshot of the Posit Cloud login and sign-up interface. At the top, there are two tabs: 'Log In' and 'Sign Up'. The 'Sign Up' tab is highlighted with an orange circle. Below the tabs is an email input field with the placeholder text 'Email'. Below the input field is a blue 'Continue' button. Below the 'Continue' button is a link that says 'Forgot your password?'. Below this is a horizontal line with the word 'OR' in the center. Below the line are three buttons for social login: 'Log in with Google' (with the Google logo), 'Log in with GitHub' (with the GitHub logo), and 'Log in with Clever' (with the Clever logo). At the bottom, there is a line of text that says 'By logging in, you agree to the Posit Service Terms of Use and Privacy Policy.'.

Create your own copy of the public curriculum

Click “START.” A new, editable copy will open that is private to you.

ons and documents to Posit Cloud is now removed for all users. Please visit **Posit Connect Cloud** to support your deployment needs.

Now you're ready to follow along!

Click “accessing_data” to navigate to the materials for today’s session

Road map

1. Overview of data and tutorial code access
2. Getting set up on your own device
3. levante R package walkthrough
4. Data details
5. Getting help

levante R walkthrough on R/RStudio

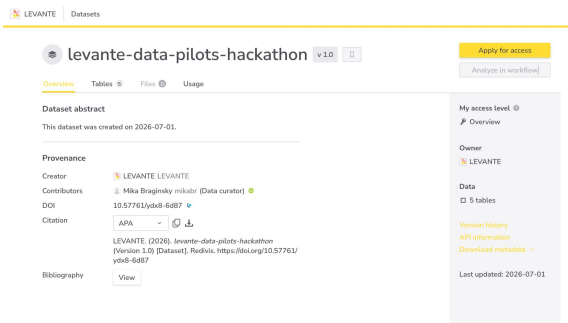

Open `public_curriculum/accessing_data/levante-r-walkthrough.qmd`

Run the first R chunk to download and load required packages (this takes awhile!)

levante reads Redivis tables into R as dataframes

Redivis

- Each Redivis dataset contains different tables (spreadsheets about parameters, participants, scores, trials, etc.)
- You can export tables directly from Redivis, but using levante is preferred.

levante-data-pilots-hackathon dataset

<https://stanford.redivis.com/datasets/fpx0-afemn2k0w>

levante (R package)

- Contains functions that retrieve each type of table: `get_participants()`, `get_scores()`, `get_trials()` etc.

levante 0.1.0.9000

Package index

All functions

`get_item_parameters()`

Get item parameters

`get_participants()`

Get participants

`get_raw_table()`

Get raw table

`get_scores()`

Get scores

`get_surveys()`

Get surveys

`get_trials()`

Get trials

levante R walkthrough on R/RStudio

Now let's run the rest of the walkthrough code together!

Road map

1. Overview of data and tutorial code access
2. Getting set up on your own device
3. *levante R* walkthrough
4. Data details
5. Getting help

Data structure

Table name	ID column	Description	Additional information
participants	user_id	Information about child participants, where each row is a child participant.	
scores	run_id	Information about task ability scores across participants and tasks, where each row is a single score.	– Overview of tasks – Guidelines for interpreting scores and details about scoring methods
surveys	survey_id	Information about survey responses across participants and surveys, where each row is a single survey item response.	– Child survey info – Caregiver survey info – Teacher survey info
trials	trial_id	Information about trial level task responses across participants, tasks, and trials, where each row is a single trial-level response.	– Overview of tasks

Table links

- `scores.run_id ↔ trials.run_id`
- `scores.user_id ↔ participants.user_id`
- `surveys.child_id ↔ participants.user_id`

Data structure

Most commonly
used variables
are within the
scores table

Name	Type	Label
redivis_source	string	source dataset identifier
site	string	site identifier
dataset	string	dataset identifier
run_id	string	run identifier
user_id	string	participant identifier
age	float	participant age (years)
assignment_id	string	assignment identifier
task_id	string	task identifier
task_version	string	task version number
task_code	string	task short name
language	string	task language
adaptive	boolean	adaptive
score	float	score
score_se	float	score standard error
score_type	string	score type
scoring_model	string	scoring model
max_incorrect	integer	maximum number of incorrect trials
max_time	integer	maximum time (minutes)
sequential_stimulus	boolean	sequential stimulus
corpus	string	item corpus identifier

2. Getting set up on your own device
3. levante R walkthrough
4. Data details
5. Getting help

Getting help with data access

- Post on #accessing-data Slack channel
- Q&A and extended help time after today's session
 - Especially if you were hoping to use Option 1 (tutorial code and data on your local device)
- Troubleshoot at general data access help hours
 - 10:30 to 11:30 am Pacific on Tuesday, July 7
 - 7:00 to 7:45 am Pacific Wednesday, July 8
 - Zoom links on the schedule (Google Sheet)

Thank you!

Q & A

Extras

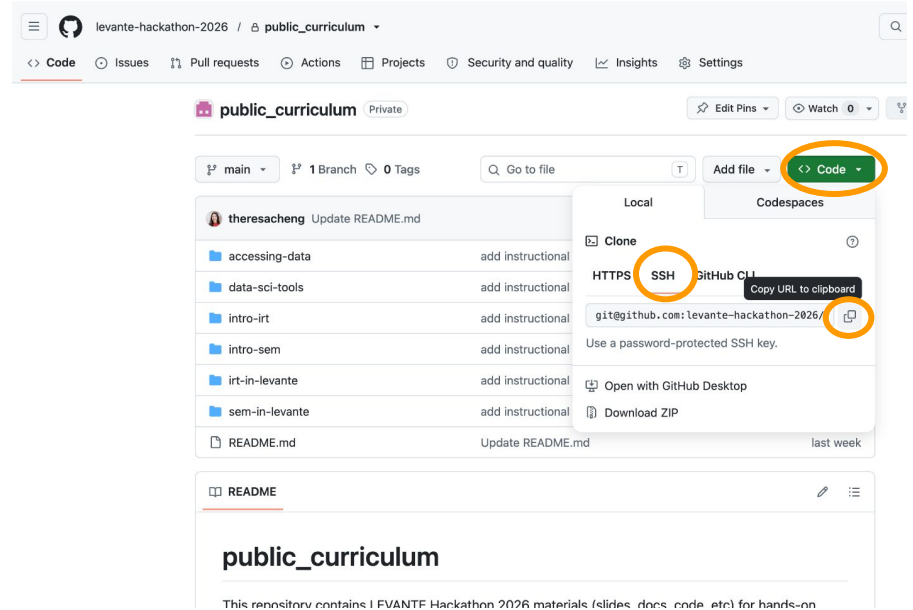

Option 1. On your device

GitHub Tutorial Repository:

https://github.com/levante-hackathon-2026/public_curriculum

Click "Code," then copy the ssh url to clipboard

Could also click Download ZIP, but will need to repeat download for each update

Option 1. On your device

Open your computer terminal and navigate to the desired folder location

Then type **git clone** and paste what was copied to the clipboard

The files from the repository are now available for use on your device. Use **git pull** to receive updates

```
